Letter of Recommendation
Cardinal Engineering Associates, Inc.
99 Colony Street
Meriden, Connecticut 06451

To Whom It May Concern:

Cardinal Engineering Associates of Meriden, Connecticut was contracted by the Town of Deep River in April, 2002 to design a major sanitary sewer extension project in Deep River Town Center to allow the elimination of failing septic systems which are polluting the Deep River stream. The project consists of sixteen thousand linear feet of sanitary sewers, a pump station, fifteen hundred feet of force main, and several hundred feet of low pressure sewers. The sanitary sewer extension will require two river crossings.

Cardinal assisted in the preparation of the construction Grant and Loan application for this project which is funded by the Connecticut Department of Environmental Protection and is currently providing resident engineering services.

As superintendent of the Water Pollution Control Facility, I highly recommend the firm of Cardinal Engineering Associates to any organization requiring the services of a consulting engineer for the planning, design, or construction administration of sanitary sewer and pump station projects.

Cardinal Engineering's work has consistently been of the highest technical and professional caliber. All work has been completed on time and within budget.

If you have any questions or would like additional information, feel free to contact me.

Very truly yours,

Peter Lewis
WPCF Superintendent
