Meriden, CT 06451

Re: Reconstruction of First, Second, Third and Fourth Streets

Dear Joe

Your firm is in the process of completing plans for the above referenced road reconstruction project for the Town of Suffield, which would involve reconstruction of 1.2 miles of badly deteriorated roads with inadequate surface and subsurface drainage.

Cardinal Engineering has provided all design services for this project including survey, subsurface exploration, hydrology and hydraulics, roadway and drainage design in an efficient manner while responding to concerns of the Town and public through project and site meetings to address key issues. Your assistance in successfully completing our recent public information meeting was greatly appreciated.

Based on my experience with your firm on this project, I would recommend your firm for the design of local road improvement and other public works projects.

Very truly yours,

Gerald J. Turbet, P.E.
Town Engineer
