Cardinal Engineering Reference

November 1, 2006

To Whom It May Concern,

The Town of Vernon approved an \$18 million five year bonding program for infrastructure reconstruction in November 2004. Cardinal Engineering was selected by the Town to perform survey, design, construction inspection and contract administration for the reconstruction of 69,000 linear feet town streets and two town bridges. Cardinal Engineering has provided the town with extraordinary service by performing all work within the time schedule and within budget. After the first two years of this five year program 50% of the total projects by mileage are complete or under construction. They have proven to us that they are a superior consulting engineering firm providing us with quality survey design and construction management services. In my twenty five years of municipal engineering I have yet to work with a consulting engineering firm that has been as responsive and as committed to their client and their projects as Cardinal Engineering.

It is always a pleasure to work with Joseph Cermola, Joseph Cermola III, David Arzt and the rest of the Cardinal Engineering staff. Therefore, I am happy to recommend Cardinal Engineering to any community that has the opportunity utilize their services.

Very Truly Yours

Tim Timberman P.E. & L.S.
Town Engineer
